

FLOORS

Communicating with the space around us

A complete range of self-adhesive solutions for design projects, for promotional purposes or for different surface decoration in commercial or private buildings: from glazed surfaces to walls and floors. All the materials in this range can be used with the main large format digital printing techniques: solvent, eco-solvent, Latex and UV ink-jet to meet all market requirements.

FLOORS

Communication at your feet

Short-term graphics for indoor floor decoration in shops, supermarkets, airports and exhibition centres. It includes a white vinyl film combined with a specific adhesive that adheres perfectly to the floor to prevent tripping, while ensuring easy and clean removal. The adhesive has been formulated to withstand the most common industrial floor detergents. The vinyl printing film is combined with an embossed lamination film with certified anti-slip properties (R-10), which also protects the graphics from wear and tear due to continuous footsteps.
