

SECURITY

Safety on a label

Materials dedicated to self-adhesive security and anti-theft labels. Face materials contain **micro fibres, security patterns or are ultra-destructible**. Papers without optical brightening agents are the perfect face materials for creating highly specialised security products. Our OBA-free Security Five, on the other hand, is a kind of paper with a high quality finish that contains red and blue security

SECURITY

Anti-tampering and Ultra-destructible

The shiny silver polyester in this range contains an **invisible texture** on the underside which, when the label is removed from the surface where it has been applied, **separates from the film and remains visible on the product**, making it impossible to re-apply the label.

The ultra-destructible, extremely brittle opaque white vinyl film with a high-performance permanent acrylic adhesive. Once the label created with this material has been applied, **any attempt to tamper with it or remove it from the application surface is in vain**, as it remains visible on the product.

	PRODUCT	ADHESIVE	LINER	FACE WEIGHT g/m ²	FACE THICKNESS μ	DESCRIPTION
