

A wide choice of self-adhesive materials for food packagings, fully compliant with the major directives governing this industry.

FOOD

EC 1935/2004 & EU 10/2011 Regulation

Self-adhesive materials are regulated by **EC 1935/2004** requiring the use of packaging which does not contaminate food, and also **EU 10/2011**, a standard which specifically refers to all components of a filmic multi-layer label construction which forms part of food packaging: this includes face materials, adhesives and top coatings.

Fully certified self-adhesives for food applications!

There are stringent criteria which a label has to meet in order to be considered a suitable packaging material in the food industry: application to cold and moist surfaces, contact with fatty substances and oil and storage at deep freeze temperatures.

The face materials of this range, including the films which feature the **specialist coating TC8**, and their adhesives are fully compliant with the major directives governing the food industry: ISEGA, the BfR (German Recommendations on Food Contact Materials) and EU regulations for direct contact to dry and moist foodstuff as well as US standard FDA (Food and Drugs Administration).
