

A range of lamination materials to protect labels from scratches or to enhance the appearance of labels with different finishes.

## OVERLAMINATING FILMS

### Labels look better!

Lamination provides an ideal **method of enhancing your product image and quality**. It offers the ability to create labels with different finishes.

Gloss clear over laminate will ensure deep, bright colours are reflected in the best possible light on the supermarket shelves. Matt clear over laminate creates a softer look and feel for your label. Over lamination allows the label printer to raise the performance and quality profile of standard paper label grades.

### Protect your label

Besides the aesthetic effect, lamination confers also a protective feature to your labels, giving excellent **resistance against scratches** for the printed labels.

### Velvet feel for your label

An innovative "soft touch" printable thin polypropylene film has been specially designed for applications in the home and personal care industry, where the tactile nature of the surface will enhance product image. The **"peach like" surface introduces a new generation of lamination** films, not only perfect for lamination but also suitable for secondary printing by thermal transfer and traditional techniques, making variable information or personalization achievable.
