

Specialized products to fight counterfeiting and tampering with visible security pattern and with an ultra-destructible face material.

SECURITY

Security papers

Vellum and Coated papers with no added optical brightening agents (OBA) are perfect base materials for the creation of **specialised security products**, while our Security Five OBA Free is a high finishing quality paper which incorporates red and blue security fibres – visible under UV light.

Tamper-evident

The bright silver polyester of this range contains on the underside an invisible chain pattern. When attempts to remove labels from the final substrate are made, this pattern separates from the film and remains on the labelled item. It is then **impossible to reposition the tampered label** on the substrate. On request other versions of this systems are available.

Ultra-destructible

A matt white vinyl film, extremely fragile, coated with a high performance permanent acrylic adhesive. When this label is applied, it has the characteristic of being **ultra-destructible whenever someone tries to tamper with or remove it.**
