

OPEN & CLOSE FOR WET WIPES

OPEN & CLOSE is the range of products designed for all types of "open and close" packs, from applications for dry products to applications for wet wipes: hand wipes, baby wipes, cosmetic wipes and household wipes.

HYGIENE FIRST

The personal cleaning and disinfection of objects and surfaces around us requires increasing attention, especially nowadays that the whole society is playing a decisive match to defeat Corona Virus' spread and the constant increase in the demand for sanitized and antibacterial wet wipes confirms this trend.

APPLICATION AREAS

- Sanitizing wipes
- Household wipes
- Baby wipes
- Cosmetic wipes
- Toilet wipes

OPEN & CLOSE

HIGH RESISTANCE

Open and close labels must facilitate the opening and correct closing of the package repeatedly, keeping the wipe moist and easy to use. Ritrama's OPEN & CLOSE self-adhesive films have been formulated and tested to ensure high resistance to repeated use, even if the adhesive part of the label is exposed to the content, ensuring that the product remains unchanged without releasing any trace of adhesive on the packaging; and PET liners are available for high speed dispensing process and clear on clear labels.

KEY FEATURES

- White and clear polypropylene and polyester facestocks;
- Adhesives with good solvent and moisture resistance;
- High tear resistance;
- Clean removability.

A SUSTAINABLE SOLUTION

Thanks to their technology, the thicker materials in the "OPEN & CLOSE" range are a valid alternative to rigid plastic lids, widely used in this sector: being thinner and lighter they allow to reduce the quantity of waste.
